

Gold Standard

Superior's O/S Gold Standard process inks provide a high quality product straight from our warehouse to your pressroom.

O/S Gold Standard inks are manufactured using 25% bio-renewable raw materials and are formulated to provide outstanding performance on today's high speed perfecting presses with stable ink / water balance, good rub resistance, excellent dot reproduction and high gloss.

Fast setting speeds allow the printer to run with little spray powder while meeting the demanding production schedules in today's fast-paced manufacturing environments. The Gold Standard series' stay open properties mean less digging inks out of the fountains and more time printing.

Using fine pigment dispersions, the Gold Standard series inks allow for consistent color stability during extended press runs.

O/S Gold Standard process inks have been formulated to conform to the ISO 2846-1 standard allowing the printer to achieve a variety of today's print conditions (ISO 12647-2, G7, GRACoL, etc.) in the pressroom.
